Here's a simple explanation of the process flow:

1. **Start** at "Gather new product requirements" (from n5).
   Then...

2. **Two tasks happen separately and simultaneously after gathering requirements**:

   - *Path 1*: Do "Business planning" (n3 to n13)

   - *Path 2*: Do "Technical preparation" (n9 to n7)

   Both paths must finish before moving forward.
   Next...

3. **Two new parallel tasks start** (after silent transitions merge):

   - *Path A*: Begin "Product development" (n6 to n12)

   - *Path B*: Begin "Sales development" (n8 to n1)

   These two tasks work independently but must both finish.
   Then...

4. **Everything comes together** (after silent transitions merge again):
   Do "Product release" (n10 to n11) to finish the process.

Key notes:
- Silent transitions (unlabeled steps) act like checkpoints to synchronize tasks.
- "Business planning" and "Technical preparation" must **both finish** before splitting into "Product development" and "Sales development".
- "Product development" and "Sales development" must **both finish** before the final "Product release".

No steps are skipped, repeated (no loops), or mutually exclusive. All labeled tasks are required.
